To whom it May Concern,

We started searching for crane service/maintenance companies approximately two years ago due to repeated failures and breakdowns with our cranes. These failures were causing significant interruption and loss of production. We placed an emphasis on good quality maintenance and inspections that would not only increase the uptime of our cranes but eliminate repeated failures.

We came across a brochure for Expert Crane and decided to give them a call to see what they were about. After a long process of interviewing several competing companies we decided to go with Expert Crane as our full service maintenance and inspection partner.

I can tell you that I could not be happier with the decision that we made almost two years ago. The uptime on our cranes is nearly 100% and we have not had any repeat failures occur during this time. We went from constantly working on our cranes and shutting down production to never having to worry about them. Expert Crane does a fantastic job of inspecting our equipment and preventing failures and this is the key to a great maintenance program!

Thanks,

Andrew Wurts
